Dimensions and Specifications (in inches)

Clearances: This Monogram free-standing refrigerator requires the following clearances for proper air circulation, plumbing and electrical connections.

Sides 5/8"
Top 1"
Back 1"

If the refrigerator is to be installed in a corner:

- A 1-1/2" clearance between the case trim and the adjacent wall on both sides of the refrigerator will assure a 90° door opening and access to all drawers.
- Allow 11-1/4" clearance on the freezer side for removal of ice bin.
- On the fresh food side, drawers can be removed by first disassembling door bins. Or, allow 14" clearance to remove drawer without disassembling the door bins.

Additional Specifications: The water line can be routed through the floor or through an adjacent cabinet, as close to the back wall as possible.

A 115 volt, 60 Hz. 15 or 20 amp power supply is required. An individual properly grounded branch circuit or circuit breaker is recommended, as noted on the rating plate. The rating plate is located on the bottom of the cabinet front of the fresh food compartment and is visible when the door is opened.
