

SIDE TRIM EXTENSION KIT INSTALLATION INSTRUCTIONS

The side trim extensions are used to fill any gaps between the slide-in range and adjacent cabinets (up to 1/4 " each side). If the range is already in place pull it out of the counter cutout a bit, in order to reach the back of the existing side trim more easily.

Slide the side trim extensions onto the existing side trim as shown below.

After putting the range back in its proper position adjust the side trim extensions to meet the front of the cabinets. The side trim extension pieces are adjusted easily by using a block of wood to move them (tap with hammer).
