

Installation Instructions

Dishwasher Drawer

BEFORE YOU BEGIN - Read these instructions completely and carefully.

⚠ WARNING

- To reduce the risk of electric shock, fire, or injury to persons, the installer must ensure that the dishwasher is completely enclosed at the time of installation.
- **FOR PERSONAL SAFETY:** Remove house fuse or open circuit breaker before beginning installation. Do not use an extension cord or adapter plug with this appliance.
- The improper connection of the equipment grounding conductor can result in a risk of electric shock. Check with a qualified electrician or service representative if you are in doubt that the appliance is properly grounded.
- If house wiring is not 2-wire with ground, a ground must be provided by the installer. When house wiring is aluminum, be sure to use UL-Listed anti-oxidant compound and aluminum-to-copper connectors.
- To reduce the risk of electric shock, fire, or injury to persons, the installer should check to ensure that wires are not pinched or damaged, the house wiring is attached to the dishwasher through a strain relief, and all electrical connections made at the time of install are contained inside of the terminal block cover.
- **For models equipped with power cord:** Do not modify the plug provided with the appliance; if it will not fit the outlet, have a proper outlet installed by a qualified technician.

⚠ CAUTION

While performing installations described in this booklet, gloves, safety glasses or goggles should be worn.

FOR YOUR SAFETY

Read and observe all **WARNINGS** and **CAUTIONS** shown throughout these instructions.

IMPORTANT – Observe all governing codes and ordinances.

PREPARE ELECTRICAL WIRING

⚠ WARNING

FOR PERSONAL SAFETY: Remove house fuse or open circuit breaker before beginning installation.

Do not use an extension cord or adapter plug with this appliance.

⚠ ADVERTENCIA

PARA SEGURIDAD PERSONAL: Quite el fusible o abra el interruptor de circuitos antes de comenzar la instalación. No utilice un cable de extensión o un enchufe adaptador con este artefacto.

ELECTRICAL REQUIREMENTS

Be sure that the electrical connection and wire size are adequate and in conformance with the National Electric Code, ANSI/NFPA 70 – latest edition, and all local codes and ordinances.

This appliance must have:

- 120V, 60Hz, AC-only, 15-ampere or 20-ampere, fused electrical supply.
- Wiring must be 2 wire with ground and rated for 75°C (167°F).
- If the electrical supply does not meet the above requirements, call a licensed electrician before proceeding.

It is recommended to have:

- A circuit breaker or time-delay fuse.
- A properly grounded individual branch circuit.

Grounding Instructions—Permanent Connection

This appliance must be connected to a grounded metal, permanent wiring system, or an equipment-grounding conductor must be run with the circuit conductors and be connected to the equipment-grounding terminal or lead on the appliance.

Grounding Instructions—Power Cord Models

This appliance must be grounded. In the event of a malfunction or breakdown, grounding will reduce the risk of electric shock by providing a path of least resistance for electric current. This appliance is equipped with a cord having an equipment-grounding conductor and a grounding plug. The plug must be plugged into an appropriate outlet that is installed and grounded in accordance with all local codes and ordinances.

⚠ WARNING

The improper connection of the equipment grounding conductor can result in a risk of electric shock. Check with a qualified electrician or service representative if you are in doubt that the appliance is properly grounded.

⚠ WARNING

For models equipped with power cord: Do not modify the plug provided with the appliance; if it will not fit the outlet, have a proper outlet installed by a qualified technician.

⚠ ADVERTENCIA

La conexión inadecuada del conductor de conexión a tierra del equipamiento puede provocar un riesgo de descarga eléctrica. Consulte a un electricista calificado o representante de servicio técnico si tiene dudas sobre la correcta conexión a tierra del aparato.

⚠ ADVERTENCIA

Con los modelos equipados con cable de corriente: No modifique el enchufe provisto con el electrodoméstico; si no coincide con el tomacorriente, solicite la instalación de un tomacorriente apropiado a un electricista calificado.

Installation Preparation

OPTIONAL - HARDWIRING PRIOR TO INSTALLATION

POWER CORD OR HARDWIRED OPTION

We recommend the use of the power cord. If using the power cord option, skip steps 1-5 and proceed to the **PRODUCT DIMENSIONS** section of this Installation Instructions.

If however you elect to hardwire the dishwasher drawer, follow steps 1-5 and then continue with the rest of the Installation Instructions.

1 REMOVE THE LOWER DRAWER (Skip step if using the power cord.)

To prevent kinked hoses

Either sit the drawer down on the left hand side (recommended) or rotate the drawer clockwise, resting it on its side after removal.

Press the release tabs in on either side and push back to release drawer from runners. Lift drawer off runners.

Push drawer runners back in on either side.

Rotate the drawer clockwise (max. 90°) and rest on side.

2 REMOVE THE ACCESS COVERS (Skip step if using the power cord.)

- 1 With a flat-bladed screwdriver, press in **both** clips and pull to slide out the access cover.
- 2 Unscrew the electronics module cover.
- 3 Carefully pull out the electronics module and rest on the chassis base out of the way.
- 4 With a screwdriver, unclip the plastic harness cover and hinge open.
- 5 Slide the terminal block cover sideways to unlock and hinge open to access the terminal block.
NOTE: Only unscrew the white and black terminals two turns. They are fork terminals and do not require the screws to be removed. The green wire requires the screw be removed. It is a ring terminal. Remove the center Ground screw.
- 6 Unscrew the black, white and green wires.

Installation Preparation

OPTIONAL - HARDWIRING PRIOR TO INSTALLATION - CONTINUED

3 REMOVE THE POWER CORD AND EXTERNAL KNOCKOUT (Skip step if using the power cord.)

- 1 From the outside, cut the power cord collar off flush at its base using wire cutters. Discard the exterior power cord.
- 2 From the inside, remove the power cord/strain relief from its U-shaped retainer slot in the base pan. Discard the interior power cord/strain relief.
- 3 From the outside, knock out the external knockout in the base pan using a hammer and screwdriver.

4 TERMINATE HOUSE WIRING AS SHOWN AND REPLACE MODULE AND COVERS (Skip step if using the power cord.)

⚠ WARNING

The improper connection of the equipment grounding conductor can result in a risk of electric shock. Check with a qualified electrician or service representative if you are in doubt that the appliance is properly grounded.

If house wiring is not 2-wire with ground, a ground must be provided by the installer. When house wiring is aluminum, be sure to use UL-Listed anti-oxidant compound and aluminum-to-copper connectors.

- 1 Fit a suitable strain relief cable clamp for the conduit through the metal knockout.
Ensure wiring is routed through or under housing ribs.
- 2 Screw down the black, white and green wires correctly.
- 3 Push the plastic harness cover back over. It should clip back into place.
- 4 Fold down and slide back the terminal block cover.
- 5 Refit the electronics module back into position, being careful of wiring.
- 6 Replace the screw securing the electronics module.
- 7 Slide the access cover back, ensuring the 2 clips shown are fully locked in place.

NOTE: Use copper conductors only.

IMPORTANT: Ensure house wires are routed **UNDERNEATH** all other harness wiring from the electronics module.

⚠ WARNING

The improper connection of the grounding conductors can result in a risk of electric shock. Both ring terminals must be replaced and the Ground (green or bare) wire clamped under the Green Ground Screw.

⚠ ADVERTENCIA

La conexión incorrecta del conductor de conexión a tierra del equipo puede provocar un riesgo de descarga eléctrica. Ambas terminales de anillo deben reemplazarse y el cable de tierra (verde o descubierto) debe quedar sujetado debajo del tornillo de conexión a tierra verde.

Installation Instructions

CHOOSE WHICH INSTALLATION METHOD (A) OR (B) IS MOST SUITABLE FOR YOUR CABINETRY

A RECOMMENDED METHOD (A) - SECURE WITHOUT DRAWER REMOVAL (FRAMELESS CABINETRY ONLY)

OPTION A - RECOMMENDED

A1 ATTACH SIDE MOUNTING BRACKETS

Clip all four side mounting brackets into their slots using a flat-bladed screwdriver. Ensure they're securely fitted before sliding product into cavity.

The mounting slots are in pairs, one on each side diagonally across the product. A bracket must match A slot and B bracket must match B slot.

When fitting brackets, ensure the ends are not pushed down into the chassis.

A2 PULL HOSES THROUGH AND PUSH UNIT INTO THE CAVITY

Optional - Attach the two top mounting brackets (x2)

When fitting brackets, ensure the ends are not pushed down into the chassis.

Initially level the product

You can raise or lower the product by twisting the feet. Then take care when pushing the product into the cavity that you do not bend the feet.

As you push product in, pull through hoses and cord, ensuring they don't get kinked or twisted.

Installation Instructions

OPTION A - RECOMMENDED (CONTINUED)

A3 SECURE TO THE SIDE CABINETRY - OPTION

Open the drawer halfway. Using a flat bladed screwdriver, pry the grey rubber plug out of the trim moulding.

Replace the grey rubber plug back into the trim moulding and ensure the trim seal is facing forward.

Drill pilot holes and use a small Phillips screwdriver to drive screws through the trim moulding, securing the side mounting bracket to the cabinetry.

Do not damage the rubber trim seal.

Repeat for all four brackets.

SECURE TO THE ABOVE CABINETRY - OPTION

AFTER SECURING, REFER TO THE, "FIT THE SUPPLIED TOEKICK PANEL" STEP

Installation Instructions

CHOOSE WHICH INSTALLATION METHOD (A) OR (B) IS MOST SUITABLE FOR YOUR CABINETRY

B ALTERNATE METHOD (B) - SECURE BY REMOVING THE LOWER DRAWER

OPTION B - ALTERNATE METHOD

B1 PULL HOSES THROUGH AND PUSH UNIT INTO THE CAVITY

Optional - Attach the two top mounting brackets (x2)

When fitting brackets, ensure the ends are not pushed down into the chassis.

Initially level the product

You can raise or lower the product by twisting the feet. Then take care when pushing the product into the cavity that you do not bend the feet.

As you push product in, pull through hoses and cord, ensuring they don't get kinked or twisted.

B2 REMOVE THE LOWER DRAWER

To prevent kinked hoses

Either sit the drawer down on the left hand side (recommended) or rotate the drawer clockwise, resting it on its side after removal.

Press the release tabs in on either side and push back to release drawer from runners. Lift drawer off runners.

Push drawer runners back in on either side.

Sit the drawer down

Push drawer runners back in on either side.

Rotate the drawer clockwise (max. 90°) and rest on side.

Installation Instructions

OPTION B - ALTERNATE METHOD (CONTINUED)

B3 SECURE TO THE SIDE CABINETRY - OPTION

For further adjustment, using the most appropriate length Hexagonal socket supplied, fully extend levelling feet up to required distance by hand.

Secure using two pairs of formed brackets. Repeat on the other side of the chassis.

If your unit has this front mounting tab with the slot, it is beneficial to use a screw in the slot on each side first. Loosely screw the unit into place, replace the drawer and check the alignment. Correct any alignment issues, remove the drawer again, tighten the screws in the slots and then mount with screws in the rear tabs.

B4 REFIT THE DRAWER ONTO THE RUNNERS

Lift or rotate counterclockwise the drawer back onto the drawer runners on either side.

Before refitting the drawer, ensure the hoses are not twisted and the latches at the rear of each drawer runner are facing forward.

Slip your finger under the slide and pull the release tabs forward 4" (100mm) on both sides. Ensure the tabs are fully pulled forward and click into place.

No tener cuidado podría resultar en heridas o cortes.

Mark this point on the toekick with a pencil

Lay the toekick face down on a chopping board or similar

Score along the marked cutoff line with a knife

Turn the toekick over and score along the same line

Gently snap off the excess

Smooth the edges with a file.

Slide the toekick onto the mounting rails on either side and screw the toekick onto the bottom of tub on either side.

IMPORTANT

Do not overtighten screw.

Installation Instructions

THERE ARE THREE DIFFERENT PLUMBING AND DRAINAGE OPTIONS - CHOOSE WHICH IS MOST SUITABLE

DRAINAGE OPTION 1 - Dishwasher and Ø 1 1/2" (38 mm) Standpipe

IMPORTANT

Ensure that drain hose is installed as close to the underside of the countertop as possible. This will ensure no waste re-enters the drain hose in the event of poor flow or a blockage in the plumbing.

Ensure the drain hose does not extend into water retained in the trap; an air gap is required to prevent waste water from siphoning back into the tub.

IMPORTANT

Ensure that drain connection will comply with local plumbing regulations.

Installation Instructions

THERE ARE THREE DIFFERENT PLUMBING AND DRAINAGE OPTIONS - CHOOSE WHICH IS MOST SUITABLE

DRAINAGE OPTION 2 - Dishwasher using Dual Air Gap/Break with Drain Hose Joiner

IMPORTANT

We recommend the use of a commercially available Dual (Double) Air Gap/Break Kit.

This provides totally separate draining for each drawer and eliminates possible "cross draining" problems

IMPORTANT

Ensure that drain connection will comply with local plumbing regulations.

Installation Instructions

THERE ARE THREE DIFFERENT PLUMBING AND DRAINAGE OPTIONS - CHOOSE WHICH IS MOST SUITABLE

DRAINAGE OPTION 3 - Dishwasher using drain hose joiner onto sink trap/waste tee

IMPORTANT

Ensure that drain connection will comply with local plumbing regulations.

Ensure drain hose is routed straight to the joiner so that waste water does not accumulate in the hose. Remove excess drain hose material if necessary. **Do not shorten the inlet hose.**

TROUBLESHOOTING

- **Excessive water remaining above the filter plate, after the rinse cycle. (This is displayed as an A3 fault. See Owner's Manual, "How to attend to a fault".)**
Check for a kinked drain hose, blocked or incorrectly drilled out waste connection, highloop not properly installed, drain hose not routed correctly or spray arms not in place.
- **No water supply. (This is displayed as an A1 fault. See Owner's Manual, "How to attend to a fault".)**
Check water is connected and turned on.
- **The dishwasher is beeping continuously**
There is a fault. See section 'How to attend to a fault' in the User guide for further information and instructions.
- **No program indicator lights up when the drawer is opened**
Ensure power is connected and is switched on. If it is and still no indicator lights up, see the 'Preference Options' section of the **Quick Start Guide**.
An option called 'Open drawer auto power-on' may need to be turned on.
- **Water around water supply and drainage connections**
Check connections, existing plumbing and hoses for leaks. Check rubber washer and hose clamp are correctly fitted.
- **If product is tipping**
Ensure the product is secured to the cabinetry.
- **If front panels are misaligned**
Check and level product. Check the cabinetry is square. For Integrated models, check and adjust front panel alignment if necessary.
- **Drawer doesn't close properly**
Ensure nothing is obstructing the drawer from closing properly eg hoses or drawer latches.
- If a problem occurs, consult the 'Troubleshooting' section of the User guide.
- If after checking these points you still need assistance, please refer to the Owner's Manual for warranty details and your nearest Authorized Service Center, or contact us through our website, listed below.

Installation Instructions

FINAL CHECKLIST

TO BE COMPLETED BY THE INSTALLER

- ☐ Check all parts are installed.
- ☐ Ensure that all panels and parts thereof are secure and final electrical tests have been conducted in accordance with local electrical regulations.
- ☐ Ensure product is level, securely fastened to the cabinetry and opens and closes freely. The drawers must be free to fully close with no resistance from the cabinetry.
- ☐ Ensure inlet hose to water supply has supplied rubber washer fitted, and that it's tightened a further half turn after seal contact.
- ☐ Ensure any knockouts or plugs in drain connection have been drilled out and drain connection has been made.
- ☐ The drain hose joiner must not support the weight of excess hose material. Keep drain hose as fully extended as possible to prevent sagging. Any excess length of drain hose should be kept on the dishwasher side of the highloop.
- ☐ If connecting the drain hose to the sink trap, ensure the Highloop is a minimum 150 mm higher than the drain hose joiner.
- ☐ Ensure any packaging or tape securing the racks or spray arms is removed from the drawers.
- ☐ Water softener models only: adjust the water softener setting from the default setting to suit the water hardness of the area. See the **Quick Start Guide** and section 'Water softener' in the User guide.
- ☐ Turn on the power and water supplies, then open the drawers. You should hear a beep and see a program indicator light up on the internal control panel.
- ☐ Check the spray arms are in place, mounted correctly and free to rotate, by physically rotating by hand.

- ☐ Add three cups of water into the drawer. Press >> until the indicator of the 'Rinse' program lights up. Close the drawer and press ▶|| to start the program. Repeat for the other drawer.
- ☐ After the Rinse program has finished, ensure the dishwasher has run and drained correctly.
- ☐ Check the water supply has correctly shut off and drainage connection for leakage.
